## LDAP Configuration

Image not found or type unknown

A large rectangular area with a thick gray border and a large gray 'X' drawn across it from corner to corner, indicating a missing image or a placeholder.

LDAP authentication is handled by the LDAP suite of modules. Configurations can be found here:

<http://10.0.0.79/admin/config/people/ldap>

\*\* This handles all AD user authentication so access should only be provided to trusted individuals. Users with "Admin" roles are able to access this section.

## Allowed Users

An LDAP Server configuration must be created for each allowed pool of users. One called "MTS AD" has been created. Additional server configurations may be created if needed.

An experienced AD administrator should be consulted for the correct configurations.

## Role Mapping

Users that meet certain criteria may be mapped to Drupal roles to automatically allow for additional access.
